LARGE SPECIMEN TREES

NURSERY GROWN -- TRANSPLANTED

These trees are all grown far apart in nursery rows, having been frequently transplanted to insure a good root system and render them especially suited for future moving. The caliper measurement is taken at a point twelve inches above the ground and indicated as diameter(Dia.).

The saving of time in planting such trees is so marked that scarcely any home owner can afford to plant the usual small tree which would require ten to twenty years to equal these in size.

The prices quoted below are for the trees dug with a large ball of earth, but not planted. Planting charge varies from 50% to 75% additional, depending upon conditions at point of planting, accessibility, distance, etc. Minimum planting charge on large tree orders \$15.00.

* this is
MORaine LOCUST

*distinctively beautiful...
graceful and stately*

Moraine Locust above is 21 years old

The delicate, green foliage of this graceful tree, its fast growth and resistance to disease and insects have made the Moraine Locust America's favorite tree. It attains a twenty-five foot height in just seven years... lawn grass grows luxuriously underneath! This staunch and graceful hardwood tree is winning new friends everywhere. See your nearby nursery or write to The Siebenthaler Company, Dayton 5, Ohio.

® Moraine is a trade-mark owned by the Siebenthaler Company in both United States and Canada.

THE SIEBENTHALER COMPANY

**Catalpa Drive and Siebenthaler Avenue
Dayton 5, Ohio**

8

outstanding features are making the MORaine* LOCUST America's favorite shade tree

Throughout America the Moraine Locust is rapidly becoming a favorite shade tree for Home, Industrial and Park landscaping. Hundreds of thousands are growing vigorously under all climatic conditions providing a light lacy shade under its bright green umbrella. This aristocrat of shade trees owes its popularity to a brilliant horticultural achievement which incorporates every desirable shade tree quality in its rugged structure.

These recognized features of Moraine Locust speak for themselves.

1 Vigorous fast growth

Grows to a height of 25 to 30 ft. in just 10 years, increasing its diameter faster than either the soft maple or Chinese elm.

2 Bright green foliage

Long graceful leaves keep their beautiful bright green color all season long—even in areas where rainfall is light.

3 Graceful shape

Moraine Locust branches arch upward and outward to form a wide spreading vase-shaped tree of great beauty. Its long delicate leaves give the tree a willowy grace, unmatched for ornamental plantings.

4 Storm resistant

The branches of this hardwood tree bend under heavy strain and withstand heavy wind and snow. Breaks are extremely rare.

5 Clean—free of maintenance

No thorns—no unsightly seed pods to clean up. The small leaflets fall in late autumn and sift down into the lawn making it unnecessary to rake them up.

6 Encourages luxuriant lawn growth

Sunlight filters through the light foliage to permit luxuriant growth of lawn grasses underneath the branches of the tree.

7 No surface roots

Moraine Locust roots deep, thus does not rob soil of nourishment required for good lawn grass growth.

8 Grows anywhere

Parent tree is the Honey Locust which produces good growth in any kind of soil in areas of light to moderately heavy rainfall. A long lived tree from New York to Minnesota and from Texas to Ontario.

Moraine Locust—the aristocrat of shade trees.
